Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 10, 25-39 drawn to antibodies against a thioesterase, methods of making antibodies and methods of use, classified in class 424, subclass 139.1.
- II. Claim 11, drawn to nucleic acids encoding a thioesterase, classified in class 536, subclass 23.2
- III. Claim 22, drawn to a thioesterase classified in class 435, subclass 69.1.
- IV. Claims 19-20, drawn to a method of detecting a thioesterase encoding sequences, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III and I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. The protein is involved in fatty acid biosynthesis, while the antibody binds to the protein; furthermore, the primary structure of thioesterase reveals nothing about the primary structure of any antibody which binds to it. An antibody specific for a protein has no disclosed use in maintenance of a DNA encoding that protein.

Inventions II and III and I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case

the different inventions have different functions and cannot be used together. Although the enzyme is encoded by the DNA, which has a different chemical structure, the protein can be either purified from natural sources or made by chemical synthesis such as the Merrifield procedure.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Furthermore, restriction for examination purposes as indicated is proper because the search required for any one Group is not required for another Group.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Should Group I be elected, the application will be transferred to another work unit and will most likely require further restriction.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
